

Revolutionize your digital identity program with Bravura Identity. Easily enforce security and cross-platform access policies while upholding the principles of least privilege.

DATA SHEET

Bravura Identity

Identity and Access Management

Manage and govern identities, groups, and access to systems and applications, all from one comprehensive solution — Bravura Identity. Implemented with industry-standard best practices, including automation, self-service, certification, workflow, and analytics, Bravura Identity can revolutionize your identity and access management (IAM).

With more than 150 built-in reports, dashboards, and analytics, Bravura Identity can discover, detect, and proactively remedy entitlement and identity challenges like orphan and dormant accounts, segregation of duties (SoD) violations, out-of-band access accumulation, and more. It can keep your systems, data, and applications secure while proactively enforcing cross-platform access policies and upholding the principles of least privilege.

Bravura Identity moves access changes out of the IT department and into the hands of business users with a mix of automated business processes and request approval workflows so users can increase productivity and save time. It includes the industry's largest number of connectors to simplify integration applications and manage accounts, groups, and entitlements.

Bravura Identity is part of the Bravura Security Fabric. By enabling Bravura Identity, Privilege, and Pass within this security fabric, you can easily weave access patterns as your access management program evolves without having to install separate solutions.

Real-Time Automation to Govern Identity at Scale

The first step to digitally transform identity administration and manage access churn effectively is automation. Bravura Identity does so in real time as your organization administers and governs identities at scale. Automated identity administration turns access certification into a spot check to ensure Bravura Identity operates as expected.

With Bravura Identity, intelligent automation grants access where the business need is predictable. A robust authorization workflow invites all of the right people to approve access requests, typically all at once rather than one at a time. This faster parallel authorization process shortens provisioning. Automated connectors provision and grant access without waiting for human intervention, so users have access before or as needed. The result is anticipatory, revoked on time, and in compliance with access.

ONE PLATFORM. TOTAL PROTECTION.

We safeguard what matters most — your business, your people and your data — by delivering intelligent identity security solutions that adapt to the ever-changing cybersecurity landscape. With the Bravura Security Fabric you stay ahead of evolving risks with seamless, unified protection.

Bravura Pass

Bravura Pass is a self-service password reset and enterprise password management solution that empowers users while giving IT and Security full control.

The Next Gen edition automates enterprise-wide Mass Password Reset through Bravura Safe, includes real-time strength feedback, API-level reporting, and a modern, accessible UI. It reduces help desk costs, containing breaches faster, and proving compliance at scale.

Bravura Safe

Beyond SSO and privilege, safely vault and auto-fill decentralized secrets and passwords, allowing seamless logins from all trusted devices. Detect weak passwords and safely share credentials.

Bravura Privilege

Frictionless, time-limited privileged access to reduce IT security risk and enhance accountability. Facilitate password randomizations and authorize access with a highly available, geo-redundant solution.

Correlate Access Rights to Business Responsibilities

Bravura Identity ensures users have only the access they need—no more, no less. It links access rights to business context, surfaces risk for approvers, and requires justification where appropriate. Through access certification, it reviews and removes unnecessary entitlements to maintain the right balance between security and productivity.

Comprehensive Connector Ecosystem

Enhances identity and access management with a versatile suite of connectors, tailored for modern enterprises. These connectors offer bidirectional capabilities, enabling both discovery and provisioning across various systems and applications. This allows IAM professionals to implement efficient, cost-effective identity governance solutions without additional licensing or custom development, optimizing operations and security throughout the IT infrastructure.

Align Access Controls and Processes

Weak application controls can lead to segregation of duties (SoD) and policy violations that are hard to trace. Bravura Identity monitors all systems of record, including HR and integrated apps like Active Directory, to detect and respond to changes. It enforces access policies, blocks risky requests, and flags out-of-band violations.

An integrated access certification process prompts stakeholders to review and correct entitlements, roles, and identity attributes. By preventing toxic entitlement combinations and detecting existing violations, Bravura Identity helps stop fraud and data breaches before they happen.

Prioritize High-Impact Controls

Bravura Identity helps organizations focus audit and control efforts where they matter most by ranking users based on the risk their access poses. Its segregation of duties engine defines controls, prevents toxic entitlement combinations, and detects existing violations to stop fraud and data breaches before they occur.

Support Regulatory Compliance

While regulations like SOX, HIPAA, GDPR, and ISO 27001 differ in focus, they share the need for strong internal controls and privacy protection. Bravura Identity supports these goals by ensuring access is business-appropriate and securely managing identities, entitlements, and credentials. It enforces the right authentication, authorization, and audit rules to strengthen security, governance, and compliance.

Empower Auditors to Answer Their Own Questions

Enable auditors to run reports to expedite audits and reduce the IT administration workload. With access certification and effective process automation, auditors can focus on how the process works, rather than on individual access rights.

Bravura Identity Reviews

4.4 ★★★★★ 33 Ratings

“Easy handling and user friendly experience. Love this product and want to work more on it.”

“This product has allowed us to give access to a suite of tools across a huge fleet of remote workers. The ability to deploy policy based authentication has helped ease the burden of many user requests.”

“Bravura Identity effectively does threat identification, credential management, and identity protection across our organization. The deployment process was smooth and was completed on time.”

“Simple and powerful solution to solve recording client visits and its doing well with this task and the most powerful function for our company getting a detailed report of device, platform, UTM tags of the selected visit to have analytics of what devices our clients are using and where they are access our website from.”

“This product is quite useful when your major workforce is working remotely. It is very effective in managing credentials, protecting identity, and identifying threats. It's an optimum solution for granting access, assigning permissions, and removing access when no longer needed.”
