

Reduce IT security risk and enhance authorized access and accountability with the frictionless, time-limited privileged access of Bravura Privilege.

DATA SHEET

Bravura Privilege

Privileged access management

Provide frictionless, elevated, and time-limited access to reduce IT security risk and enhance accountability with Bravura Privilege. Our privileged access management (PAM) solution supports millions of daily password randomizations and facilitates access for thousands of authorized users, applications, and systems through a highly available, geo-redundant architecture. Use Bravura Privilege to create accountability through an audit trail of privileged sessions for every account. Access and session data can be surfaced through custom reports to gain valuable insight.

As part of the Bravura Security Fabric, a singular IAM platform and framework, Bravura Privilege can integrate with every client, server, hypervisor, database, and application, on-premise or in the cloud. Working within a singular security fabric, you can easily weave access and privilege patterns by combining services as your access management program evolves without installing separate solutions.

Enable Robust Access Control Policies

Bravura Privilege provides access to shared accounts and elevated group memberships based on flexible, robust, and easily managed access control policies. High-frequency users can be pre-authorized based on group memberships or identity attributes without waiting for approvals, while infrequent users might require approval from their supervisor or other stakeholders.

Securely Store Credentials

When passwords are changed regularly, an encrypted vault prevents unauthorized disclosure and ensures maximum availability when faced with a site outage. Bravura Privilege includes a unique, geographically distributed active-active architecture that replicates this critical data set in real time across all instances for high-availability and disaster recovery scenarios.

Randomize Privileged Account Passwords

As the scope of an organization's IT assets grows — sometimes with thousands of privileged accounts across a wide variety of platforms — it can become increasingly difficult to securely manage those assets. Coordinating password changes or tracking changes back to individuals can be even more painful without a privileged access management (PAM) system. Bravura Privilege replaces shared and static passwords tied to privileged accounts with periodically new and random values based on robust password policy controls. It can enforce multiple scheduled or event-triggered password policies on fixed IT assets, laptops, and rapidly provisioned virtual machines.

ONE PLATFORM. TOTAL PROTECTION.

We safeguard what matters most — your business, your people and your data — by delivering intelligent identity security solutions that adapt to the ever-changing cybersecurity landscape. With the Bravura Security Fabric you stay ahead of evolving risks with seamless, unified protection.

Bravura Pass

Bravura Pass is a self-service password reset and enterprise password management solution that empowers users while giving IT and Security full control.

The Next Gen edition automates enterprise-wide Mass Password Reset through Bravura Safe, includes real-time strength feedback, API-level reporting, and a modern, accessible UI. It reduces help desk costs, containing breaches faster, and proving compliance at scale.

Bravura Safe

Beyond SSO and privilege, safely vault and auto-fill decentralized secrets and passwords, allowing seamless logins from all trusted devices. Detect weak passwords and safely share credentials.

Bravura Identity

Identity administration and access governance with full process automation, on-premises and in the cloud.

Get Just-in-Time Access

Bravura Privilege takes just-in-time (JIT) access further supporting create, read, update, and delete (CRUD) operations and group elevation within privileged sessions. It enables on-demand creation, modification, and removal of privileged accounts to help organizations achieve Zero Standing Privileges (ZSP) where it makes sense.

Ensure Administrator Accountability

Many IT teams still rely on shared admin IDs with little traceability. Bravura Privilege fixes that by randomizing admin passwords, mediating logins, and requiring verified, authorized access. Every privileged action ties back to an individual—delivering full accountability without slowing work down.

Generate Forensic Audits of Privileged Logins

When investigations arise, Bravura Privilege makes it possible to see exactly what happened. It records keystrokes, timestamps, and session data for forensic analysis, policy compliance, or training. Session playback and search ensure transparency, while access controls and approvals protect user privacy.

Discover SSH Trust Relationships

Discover and analyze existing SSH trust relationships and create temporary access to build a trust graph to prevent unauthorized access. Trust graph analytics, in turn, can identify high-risk accounts and disable unnecessary trust relationships.

Easily Scale Up

In large enterprises with constant account turnover, manual setup isn't feasible. Bravura Privilege uses advanced infrastructure and auto-discovery to monitor inventory, apply management rules, and identify accounts, groups, and services. Policies for account management and classification make scaling effortless.

Manage Personal Administrator Accounts

Administrators often use secondary accounts for elevated privileges. These must be properly tracked. Bravura Privilege ties each personal admin account to its rightful owner and restricts access to its intended purpose—without disrupting productivity.

Delegate and Maintain Tight Policy Control

Designed with empowerment in mind, Bravura Privilege features a team-centric framework that enables resource owners to onboard and offboard servers, accounts, and colleagues for whom they are responsible.

Bravura Privilege Reviews

4.4 ★★★★★ 21 Ratings

"Very helpful to eliminate static passwords and great to manage Elevated Windows admin passwords. The user interface is easy and robust."

"I loved the ease and speed at which we were able to deploy this."

"Bravura Security has been a good partner. They are very responsive to support requests, provided a strong partner resource to assist us with the implementation, and make a good product with a considerable number of features."

"Bravura Security Privileged Access Manager secures access to elevated privileges. It is very useful to eliminate shared and static passwords for privileged accounts. Also, it enforces strong authentication and reliable authorization prior to granting access."

"Bravura Privilege creates strong accountability, strong authentication with strong authorization prior to granting access. It provides very good reliability while ensuring continuous access to shared accounts and security groups."

"Bravura Privilege helped us to move out from static windows password management, to strong elevated privilege authentication."
