

Bravura Safe is an easy-to-implement enterprise password safe that centrally, consistently, and securely manages decentralized passwords, secrets, and files to protect against cyberattacks.

DATA SHEET

Bravura Safe

Studies have shown that each person has to remember an average of 70 to 100 passwords for external services and internal resources including sensitive spreadsheets, websites, knowledge bases, productivity apps, and systems. They also have a range of digital records or secrets to recall like corporate credit cards, ssh keys, certificates, and more.

While many institutions have implemented strong internal password management solutions and combined them with easy-to-use Single Sign-On (SSO) features, IT teams now have another cybersecurity risk: an explosion of unmanaged passwords and secrets outside of the IT enterprise applications powering their identity and access management or privileged access management solutions. How are your students, staff, and affiliates managing their passwords and secrets?

Best case, this gap has forced user populations to use unmanaged third-party solutions to store and manage their passwords and secrets, or worse stash them in chat messages, and on spreadsheets, or re-use primary institution passwords to make them easier to remember. Weak and insecure passwords are an easy target and are often a hacker's first entry point into your institution. How safe are your institutions' decentralized passwords?

Ensure Decentralized Passwords Are Not A Loose Thread

Bravura Safe is an enterprise password safe with a robust central security manager that complements core password management solutions that institutions already use. It leverages two decades of enterprise cybersecurity solutions to provide password storage that centrally controls, manages, and protects decentralized passwords, secrets, and files. Students, staff, and affiliates can securely send time-bound passwords for new accounts, encryption keys for files, or entire files without them being leaked or intercepted, and with only one password to their Bravura Safe to remember.

Simplify password storage

Save all passwords in one safe place with one password to remember and access them across all trusted devices.

Auto-generate strong passwords

Passwords are automatically restructured into strong passwords so all decentralized passwords that leave the IT security boundary are strong and without semblance to any password used within the institution.

Central password management

A centralized management console to the password repository provides IT security with full visibility (without values of passwords) and all capabilities that enterprise security professionals are familiar with to manage these decentralized passwords.

Encrypted repository

Centrally store and encrypt all decentralized passwords, secrets, files in a high security database for easier management and better visibility.

Safely send sensitive content

Safely send sensitive text or files to other students, staff or individuals outside the institution sharing only an encrypted URL to access and download.

Consumer-grade User Interface

Create and manage passwords using an easy-to-use consumer-grade interface so that users can easily create and manage these passwords without heavy IT support.

Improve security hygiene

Help users make better decisions by alerting them to the risks and informing them when they are using weak, compromised, or synchronized passwords to improve password hygiene.

Flexible deployment options

Bravura Safe can be implemented in a SaaS public cloud.

Fast deployment

Bravura Safe can be implemented in minutes with a fast, IT-friendly "load and go" architecture with users easily onboarded in a self-service process.

Compatible with the Bravura Security Fabric

Bravura Safe operates as a standalone solution and can be used with the Bravura Pass, Bravura Identity, and Bravura Privilege solutions.
